

Errors Are Your Friend, Not Your Enemy

Motivations

- How much time do you waste every week randomly changing code hoping errors would disappear?
- Why can experienced developers seem to fix bugs 10x faster than beginners?
- How did Stack Overflow become one of the most visited websites by developers? (Hint: error messages)
- What if debugging is not about being smart, but about knowing how to read?
- You can make code work. Can you make errors work for you?

Overview

- **Live Demo**

- Understanding the Anatomy of Python Error Messages
- Reading Tracebacks Effectively
- Debugging four common Error Types
- Debugging Mindset (*if time permits*)

- **Self-Study**

- Error-Driven Development
- Ten Additional Error Types
- Exception Handling Patterns
- Find Help Effectively

Have your notebook ready - we'll be coding together!
